

PRESENTATION

“ The Dual Vision upgrades combines colour detection with near infrared detection in order to detect materials also by colour. It is often used for applications such as coloured/clear PET bottle separation, paper/cardboard separation and any type of detection that requires colour recognition. It requires the replacement of the detection unit and dependent on the machine.

Benefits

- **Recovery of a fraction by colour sorting**
(exemple: sorting of coloured PET)
- **Epuration of a fraction**

Prerequisite

Available for G05,G07,G09 and Mistral+

Installation time on site

1 day of installation
0,5 to 1 day of adjustments depending on the stream.
