

PRESENTATION

“ **The pneumatic kit allows you to replace the air tank located on the grating of the Mistral generation G05 to G09.**
It is installed on the frame of the machine.
It is equipped in particular with a pneumatic distributor, a pressure switch and a safety valve.

BEFORE

AFTER

Benefits

It no longer requires maintenance.

The tank requires:

1 annual control visit

Decenal visit for the overhaul of the complete system

--> Without taking into account the ten-year inspection, the clarinet kit is amortized in 2 years.

Prerequisite

Adressed to Mistral G05 to G09 approaching 10 years of age.

Installation time on site

2 hours - After tank draining. (the dismantling of the tank is under the customer's responsibility)
