

**AFTER**

**BEFORE**

## PRESENTATION

“ This system replaces the anti-fall baskets with a strap system.

### Benefits

**It slows down the clogging of the return rollers and reduces the maintenance time of this sub-system.**

-> This system has the advantage of allowing dust residues to pass through while retaining the anti-fall function of the return rollers.

### Prerequisite

Compatibility with conveyor layout.  
Not compatible in case of direct access to the return rollers from underneath (walkway / work area).  
Study required to control these points.

### Installation time on site

Depending on the location of the site, therefore depending on the study.
