

Point 1 : Added of skates

Point 2 : Multiplication of plates

PRESENTATION

“The Conveyor heavy duty Kit prevents premature wear of the skid plate due to the fall of heavy objects or objects at high drop height.

2 reinforcement points:

1. **Addition of PE skids** under the skid plate.
2. **Multiplication of the number of plates** positioned (width divided by 2) in front of the glide floor with a ply joint for better rigidity.

Benefits

Maintains the service life of the skid plate for specific flows of heavy products, or in case of unsuitable object drop heights.

Prerequisite

- Spare conveyor belt or equipment required to lift the belt during the modification operation to avoid cutting it.
- Study required for site installation.

Installation time on site

1 day of intervention minimum depending on the site configuration.
