

A French Manufacturer
of Intelligent Sorting Equipment
for the Recycling Industries

[PELENCST.COM](https://www.pelencst.com)

A WORD FROM OUR CEO

Based on solid foundations: People and Innovation, we overcame many industrial challenges in the past years.

We have a simple and efficient vision: contribute and support the development of the Circular Economy. Our mission is to propose the best sorting machines on the market. And our pride is to deliver worldwide high quality service and expertise on the field.

With a solid growth and stable ownership, we continue to build up our company by investing the major part of our profits in R&D and Services. For instance, more than one third of our staff are working on tomorrow's solutions.

With our partners, we share the passion for innovation and the recycling industry to build a common and sustainable future...

Jean HENIN
Chief Executive Officer

GROW TOGETHER

Pellenc ST is a friendly company encouraging apprenticeship and self-fulfillment.

Each year, Pellenc ST dedicates more than 150 training sessions to improve employee skills but also to make customers autonomous on our products.

A WORLDWIDE REACH

The Pellenc ST Head Office is based in Pertuis, a town in Provence ideally located 20 minutes from Aix-en-Provence, and less than 50 km from Marseille Airport and Aix TGV station.

Pellenc ST has two subsidiaries: one in the United States, North Carolina and the other in Japan, Tokyo.

The company is also present in the following countries through sales offices and local agents: Spain, Portugal, Italy, United Kingdom, Germany, Benelux, Poland, Turkey, Canada, Mexico, Brazil, South Korea, Australia, China, Russia...

A MULTI -MARKETS OFFER

WASTE

MRF • MSW • C&I • C&D • Wood...

PLASTICS RECYCLING

PET • Films • PE/PP • Flakes...

METALS RECYCLING

WEEE • ELVs • Aluminium...

AN EXPERTS TEAM TO SUPPORT YOU

With over 1600 machines in more than 40 countries, the Pellenc ST network benefits from local teams specially dedicated to the clients satisfaction. Our sales and customers teams support their partners with specific expertise to optimize their sorting line. Our hotline responds 24/7 and our service engineers travel worldwide to guarantee the highest level of performance and availability.

QUALITY, OUR MAIN CONCERN

Based on proprietary R&D and «Made in France» manufacturing, Pellenc ST offers equipment that is robust and easy-to-use. The company develops methods and quality control processes. Pellenc ST is certified ISO 14001, ISO 18001 and ISO 9001. Mistral+ machines for CE and UL/CSA Full Package version are now certified by TÜV Rheinland, the leading international body for certification of safety and quality for products, services and management systems.

INDEPENDENCE

PRIVATE OWNERSHIP ENSURES
LONG TERM VISION AND
CONSISTENT STRATEGY

All equipment is designed, assembled and tested in our premises. With its integrated R&D and in-house manufacturing, Pellenc ST manages the entire value chain and is recognized as one of the most agile companies in its industry.

Pellenc ST has established strong partnerships with renowned research laboratories, key international technology suppliers and works closely with the main plant builders of the market.

INNOVATION

STATE-OF-THE-ART EQUIPMENT

A large part of Pellenc ST resources is allocated to research and innovation. Many patents have been filed in the field of spectrometry: they constitute the basis of our technology.

Infrared spectrometry, visible spectrometry, x-ray transmission and inductive sensing, these technologies have been used and tested all over the world for a variety of demanding applications.

New technologies and applications can be tested in real conditions at our 1 000m² Technical Center.

SMART SERVICES

Service contracts, trainings, parts and upgrades are included in our Performance Program: a global solution combining services and intelligent tools to optimize sorting lines and guarantee improvements in terms of cost, productivity and availability.

Our Test Center is also available for our customers and partners. Both demonstration lines are equipped with the latest technologies to study the best sorting alternatives, whether for multi-materials sorting, plastics recycling or metals recovery.
